

1/4" BARBED EQUAL T FITTING – Part No. A4600110D

1/4" Barbed Equal T Fitting used in Colorimetric Analyzers

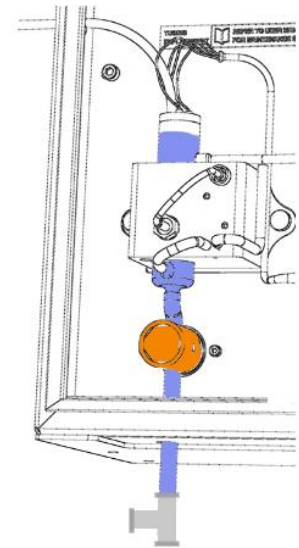

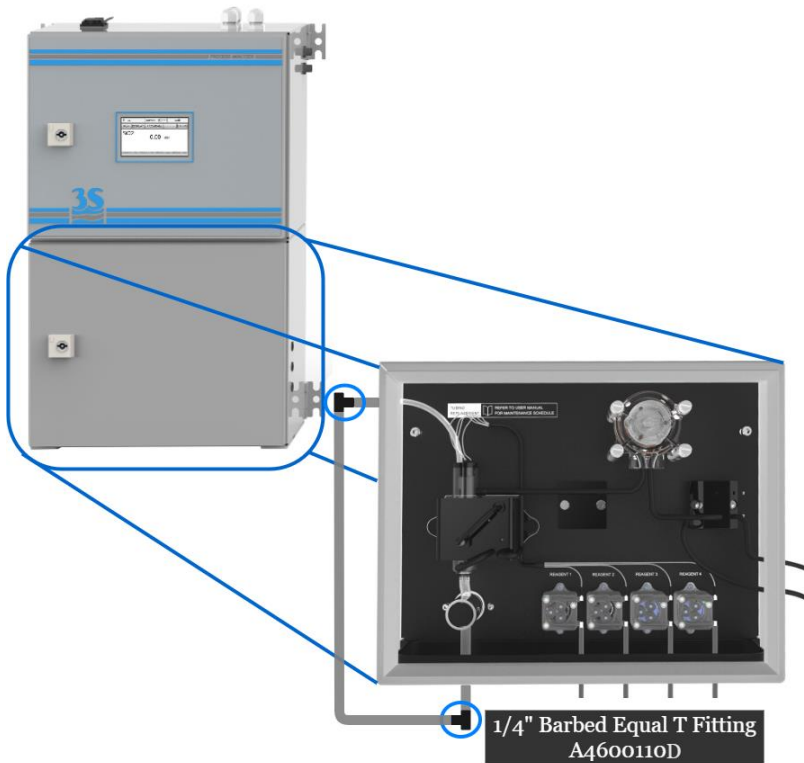

DESCRIPTION:

The 1/4" Barbed Equal T Fitting is a replacement/spare part for the colorimetric analyzers. It is used as a connector for the outlet waste and is located at the vent and drain, shown below.

At the vent, this item allows for all overflow fluid from the colorimetric cell to travel out of the drain. At the drain, this item allows for the overflow fluid and fluid from the entire colorimetric cell to empty out. It is very important that the drain line is at atmospheric pressure, and if not could lead to overpressure and damage to the analyzer.
