

26 mm REACTION CELL – Part No. A46001150

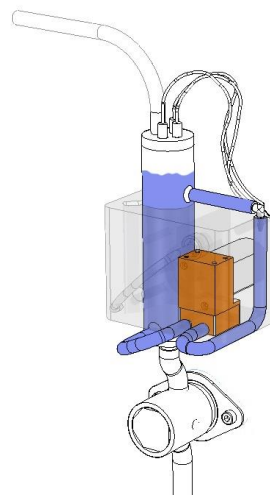

26 mm Reaction Cell used in Colorimetric Analyzers

DESCRIPTION:

The 26 mm Reaction Cell is a replacement/spare part for the colorimetric analyzers and is made of glass. The cell is positioned inside the thermostatic block and can be easily removed to allow for manual cleaning of the glass cell. Once the sample liquid is ready for analysis, the colorimetric analyzer shines the light source. A special version of the cell is available with an overflow (P/N A46001150-O) in order to have a separate wasteline for sample containing reagents.
