

Fridge for Chemicals

DESCRIPTION

The Fridge for Chemicals is used in combination with the 3S Analyzers colorimeter to keep reagents at a stable temperature. This increases the shelf life of the chemicals and accuracy of results. Based on the type of chemistry used for the analyzer, the fridge will be configured with 1 – 4 reagent tubing holes. The fridge is placed beneath the analyzer, just as the reagent bottles would be arranged. Up to four 2 liter bottles can be placed in the fridge. Available in 110 VAC or 220 VAC version.
